

UPWORK PORTFOLIO CASE STUDY

Eventspad

End-to-End Event, Guest & Secure Check-In Operating System

Most event tools stop at invitation distribution, leaving organizers with printed spreadsheets and chaotic entrances. Eventspad was conceived to own the entire guest lifecycle: creation, multi-channel invitations, RSVPs, 2D seating layouts, unique QR passes, and sub-second door validation on a single synchronized platform.

ROLE & SCOPE

Founder & Product Designer

CLIENT / ORGANIZATION

EventspadHQ Ltd (live at eventspad.com)

ENGAGEMENT & TIMELINE

Founded EventspadHQ Ltd · 4 Months (2026)

KEY DELIVERABLES

Web App, 2D Floor Planner, QR Validator App, Funnel Analytics

< 1s

Door Verification Speed

3 Steps

Event Creation Setup

\$0.10

Cost Per Guest Pass

100%

Offline Check-In Tolerance

■ PROBLEM FRAMING

The Challenge & Friction Points

Recurring failures plague events: hosts lose track of RSVPs across WhatsApp threads, door queues stall while ushers manually scan paper lists, uninvited guests enter with forwarded passes, and organizers have zero post-event attendance data. Existing tools solved one step and offloaded the rest to spreadsheets.

◆ Target User Segments & Stakeholders

Event Planners & Hosts

Organizing weddings, galas, and summits; needed seamless guest imports, RSVP tracking, and seating arrangement.

Venue Ushers & Security

Scanning hundreds of guests in low-light entrances; required instant, unambiguous pass validation under 1 second.

Attending Guests

Receiving invitations via WhatsApp or SMS; wanted 1-click browser RSVP without downloading an app.

■ STRATEGIC FOUNDATION

Core Design Principles

01 One Guest Record Everywhere

The guest is the single source of truth. RSVP status, table number, and QR pass all derive from one record—the door scanner can never disagree with the seating chart.

02 Design for the Door

The scan is the highest-stakes three seconds of any event. The validator resolves into three high-contrast states: entry granted, already used, not valid—legible at arm’s length in dark venues.

03 Pay for Guests, Not Software

Priced per guest credit (\$0.10) with zero subscription fees, aligning cost directly with the value delivered to occasional and professional hosts alike.

STRATEGIC INSIGHT

"Keeping one guest record coherent across an organizer’s laptop, a guest’s browser, and an usher’s phone on a venue’s failing Wi-Fi was the real design challenge. Designing offline-first made the entire system trustworthy."

■ SYSTEM BLUEPRINTS

Interactive 2D Floor Planner & Seating Canvas

Zoom-and-pan canvas with round, long, and stage objects, smart-guide snapping, and instant pass synchronization.

Three-step event setup wizard getting organizers from blank canvas to live RSVP in under five minutes.

◆ Live Ticket-to-Seat Sync

Reassigning a guest table instantly updates the digital pass and the usher scanner, eliminating discrepancies between seating and entry.

◆ Offline-First Door Validation

Browser validator caches guest hashes locally, resolving passes in under 1 second and syncing queued check-ins when connectivity restores.

◆ Three-Channel Delivery

Automated invitations and reminders via WhatsApp, SMS, and Email sharing a single guest status filter.

■ INTERFACE HIGHLIGHTS

Core Product Experience & Touchpoints

● High-Stakes Door Validator

Scanner resolves to three bold states (Green: Granted, Amber: Already In, Red: Invalid) with audio cues, designed for rapid processing in noisy, dim environments.

● Unified Guest CRM & CSV Matcher

Column-matching onboarding wizard reconciles arbitrary spreadsheet columns into clean, filterable guest profiles with instant RSVP tracking.

■ SCALABLE FOUNDATIONS

Tokens, States & Parity

Built on Radix primitives and Tailwind CSS with a violet-on-ink accent palette. Geist Sans handles clean UI readability, while Geist Mono powers operational metrics: table counts, scan latencies, and pass credits. Semantic color is strictly reserved for validation state.

◆ System Specifications

- ✓ Geist Sans typography paired with Geist Mono for numerical operational readouts
- ✓ Radix UI accessible interaction primitives with custom violet theme
- ✓ High-contrast scan state triad (Green, Amber, Red) visible from 6 feet
- ✓ Customizable digital ticket designer with dynamic QR placement

THE DESIGN ENGINEER ADVANTAGE

Bridging the gap between Figma and production front-end code (React, Next.js, TypeScript). Zero guesswork during developer handoff, pixel-perfect responsive execution, and bulletproof component architectures.

BUSINESS & USER IMPACT

Shipped Outcomes & Measured Results

< 1s

DOOR VERIFICATION SPEED

3 Steps

EVENT CREATION SETUP

\$0.10

COST PER GUEST PASS

100%

OFFLINE CHECK-IN TOLERANCE

◆ Validated Project Milestone

Shipped a complete end-to-end event OS: 3-step creation wizard, 2D floor planner, three-channel invites, offline door scanner, and attendance funnel analytics. Live in production at eventspad.com.

◆ Senior Product Reflections

"Owning the entire guest lifecycle is what makes individual features succeed. Seating charts are only trustworthy because digital passes read from the same record; post-event analytics are only honest because the door scanner writes back to it in real time."
