# Voxyx.ai

## Conversational AI Speech Technology & Voice Modulation Interface

Voxyx.ai is a voice-first application uniting speech recognition, natural language processing, text-to-speech synthesis, and real-time voice modulation. As Lead Product Designer, I designed a multi-modal interface that transforms complex acoustic engineering into an intuitive, responsive consumer and creator application.

■ PROBLEM FRAMING

# The Challenge & Friction Points

Voice AI interfaces often fail because users feel alienated by a black-box auditory pipeline. Non-deterministic speech recognition, background noise, accents, and latency create hesitation. Users need immediate on-screen visual confirmation of whether the AI is listening, processing, or synthesizing.

◆ Target User Segments & Stakeholders

Content Creators & Streamers

Requiring real-time voice modulation, custom vocal avatars, and low-latency audio rendering.

Accessibility Users

Relying on speech-to-text and text-to-speech for seamless hands-free communication and interaction.

Enterprise Audio Teams

Generating multi-speaker conversational voice tracks with precise cadence, pitch, and inflection controls.

■ STRATEGIC FOUNDATION

# Core Design Principles

01 Multimodal Redundancy

Always pair auditory inputs with instant visual feedback so users never have to guess whether their command was recognized.

02 Zero Acoustic Deadweight

Minimize perceived latency through streaming speech-to-text tokenization and immediate visual status pulses.

03 Human-Centric Soundscapes

Design acoustic parameter controls that mimic natural human inflection, emotional cadence, and conversational rhythm.

STRATEGIC INSIGHT

*"In voice interfaces, visual biofeedback is the foundation of trust. Combining dynamic waveform visualizations with sub-200ms processing status eliminates audio anxiety and drives interaction confidence."*

SYSTEM BLUEPRINTS

# Four Tools in One Unified Interaction Flow

- ◆ **Unified Interaction Model**

Four distinct audio tools share one interaction root, ensuring that interaction skills learned in one mode transfer effortlessly to the next.
- ◆ **Streaming Token Pulses**

UI displays live word-by-word streaming transcriptions with real-time confidence scores, avoiding jarring delayed batch updates.
- ◆ **Global Audio HUD**

Persistent mini-player HUD allows users to preview, scrub, pitch-shift, and export generated audio from anywhere in the application.

■ INTERFACE HIGHLIGHTS

# Core Product Experience & Touchpoints

● **Real-Time Spectral Command HUD**  
Live audio visualizer displaying input frequency curves, background noise levels, and immediate AI transcription status.

● **Voice Generator & Parameter Modulation**  
Granular pitch, speed, and emotional inflection controls paired with custom avatar presets and one-click voice cloning.

■ SCALABLE FOUNDATIONS

# Tokens, States & Parity

Dark-mode optimized interface designed for studio environments: neon audio frequency visualizers, fluid dynamic typography, and minimal cognitive load controls for seamless creator workflows.

### ◆ System Specifications

- ✓ Dark-mode studio aesthetic with neon audio frequency indicators
- ✓ Custom interactive waveform visualizer with scrub and slice handles
- ✓ Multi-avatar selection library with preview audio samples
- ✓ Streaming text transcription components with real-time confidence states

### THE DESIGN ENGINEER ADVANTAGE

Bridging the gap between Figma and production front-end code (React, Next.js, TypeScript). Zero guesswork during developer handoff, pixel-perfect responsive execution, and bulletproof component architectures.

BUSINESS & USER IMPACT

# Shipped Outcomes & Measured Results

< 200ms

RESPONSE LATENCY

85%

TASK SUCCESS RATE

45K+

ACTIVE USER ADOPTION

4-in-1

UNIFIED TOOL ARCHITECTURE

◆ Validated Project Milestone

Pioneered an auditory feedback interface operating under 200ms latency. Achieved an 85% task completion rate on complex multi-turn commands and scaled to over 45,000 active users.

◆ Senior Product Reflections

"Voice interfaces succeed when they provide transparent visual feedback for auditory inputs. Blending sound and screen creates confidence in conversational AI and removes the feeling of talking to an unresponsive black box."

JA

Jimmy Arikawe

Senior Product Designer & Design Engineer · Ex-Pentagram

AVAILABLE ON UPWORK

◆ End-to-End Product Design (0 to 1)

◆ Design Systems & Component Libraries

◆ Complex SaaS & Enterprise Dashboards

◆ Design Engineering (React / Next.js / TS)
