

Jimmy Arikawe

Senior Product Designer · United Kingdom · hi@jimmyarikawe.com · jimmyarikawe.com · LinkedIn · GitHub

SUMMARY

Senior Product Designer with seven years across fintech, enterprise operations and AI products. I take ambiguous problems through research, interaction design and high-fidelity prototyping to shipped software — and write the production front-end alongside the engineers building it. MSc Artificial Intelligence (Distinction); I prototype against live models rather than mocking them, which is how latency, failure states and human-in-the-loop handoffs get designed properly.

EXPERIENCE

Product Designer, Researcher & Manager · Radical Company, United Kingdom Mar 2026 — Present

- Lead design and research on client engagements, taking ambiguous business and technology problems to tested interaction models and high-fidelity prototypes.
- Build working prototypes against live LLM APIs to validate AI product concepts before engineering commits — surfacing latency and failure-state problems that static mockups hide.
- Set the reusable patterns and research frameworks the team now starts from, cutting repeat setup on every new engagement.
- Partner with engineers from exploration through implementation, owning the handoff and the interaction quality that survives it.

Product Lead & Product Designer · Omits Technology, United Kingdom Jan 2025 — Jan 2026

- Owned product strategy and design for a cross-border payments platform across web, iOS and Android — discovery through delivery.
- Cut repeat transfer time to under 60 seconds by redesigning beneficiary management and rate confirmation around the one thing users feared most: the rate changing after they committed.
- Redesigned tiered KYC with Compliance and Risk, turning a regulatory checklist into a progressive flow that 94% of users completed unassisted on first attempt.
- Established the product metrics and cross-platform design standards the team measured against, and worked alongside engineers through implementation.

Founding Product Designer & Product Manager · Persona Design, United Kingdom 2024 — 2025

- First designer at the studio, covering discovery, research, interaction and UI design across multiple client products.
- Built and maintained the shared component library that every subsequent product was assembled from.
- Turned ambiguous client briefs into journeys, prototypes and shippable high-fidelity design, testing flows iteratively rather than presenting them finished.

Product Designer / Creative & Visual Designer · Pentagram, London 2023 — 2024

- Designed interfaces and visual systems for enterprise and B2B technology clients within a multidisciplinary studio.
- Simplified complex user flows through research and usability exploration, then produced implementation-ready design in Figma.
- Worked with writers, brand designers and strategists to build coherent visual narratives around technical products.

Senior Product Designer & Product Engineer · Engage Messaging 2022 — 2023 · Concurrent with MSc study

- Redesigned the web and mobile products, contributing to a 50% improvement in measured user satisfaction.
- Wrote production front-end alongside design — prototyping in code to validate interaction concepts in days rather than in review cycles.
- Grew the design system from ad-hoc components into reusable, documented patterns.

Lead Product Designer / Data & Technology Analyst · Recyclan

2020 — 2022

- Led UX and product design for an operational data platform deployed across 14+ countries.
- Designed the dashboards and workflows three different audiences depended on — plant operators, compliance officers and business users — without building three products.
- Raised product adoption 15% by using research and usability testing to find where operators were abandoning the tool and falling back to paper.

Product Designer · Analytics Intelligence

2019 — 2021 · Overlaps Recyclan — part-time

- Designed B2B SaaS analytics, reporting and operational tooling.
- Ran usability research and iterated on behavioural data rather than opinion.
- Built dashboard and data-visualisation patterns for dense information environments.

Junior UI/UX Designer · Filmhouse Group

2018 — 2019

- Redesigned the online cinema booking experience, contributing to a 400% increase in online bookings.
- Built responsive web and mobile interfaces with a focus on accessibility and conversion.

SELECTED WORK

Full case studies at jimmyarikawe.com/work

Omits Finance — Cross-Border Remittance & Global Money Transfer Application

CirculaOps — Enterprise AI Circular Supply Chain & Operational Telemetry Platform

Mindgard AI Security Labs — Automated Red-Teaming & Vulnerability Assessment for LLMs and AI Models

VoxAid — Conversational AI Speech Technology & Voice Modulation Interface

Spot Finance — Comprehensive Mobile Fintech App for Savings, Investments & Payments

YourParkingSpace — Event Parking & Smart Mobility Experience for the UK & Ireland Market

Eventspad — End-to-End Event, Guest & Secure Check-In Operating System

SKILLS

Design Product design · Interaction design · Design systems · High-fidelity prototyping · Figma

Research Product discovery · Usability testing · Journey mapping · Experimentation

Build TypeScript · React · Next.js · Tailwind · Python

AI LLM-based systems · RAG · Conversational UX · Human-in-the-loop workflows · Model evaluation

EDUCATION

MSc Artificial Intelligence & Applications · University of Strathclyde, Glasgow, Scotland

2022 — 2023

Distinction. Deep learning and neural networks, machine learning for data analytics, AI for finance and autonomous systems. Research project: detecting plant disease with deep learning.

BSc Electrical & Electronics Engineering · University of Lagos, Nigeria

2013 — 2018

Honours.

PUBLICATION

Tech-driven Solutions for Africa's Waste Problem — Operational telemetry and circular supply chains for waste collection and recycling in emerging markets.
